Wildcat **AI**

A WORKING PROPOSAL FOR THE UNIVERSITY OF ARIZONA

People are the heart of AI.

Learn a hard concept. Prepare a class. Test an idea.
Do the work, with help that fits.

Clear data boundaries / Choice of tools / Human judgment

01 / THE PROBLEM

Too much setup. Too little support.

Finding the right account, software, and course rules shouldn’t be the hard part.

02 / THE PROPOSAL

One place to work. Help when you need it.

Bring U of A GenAI, EduCloud$_{\text{InfoSci}}$, and permitted personal tools together.

03 / THE PEOPLE

Shared decisions. A real say in what comes next.

A campus team would own the service. People who choose no AI would help shape decisions and human alternatives.

Fall 2027: start with a classroom pilot.

Check learning, usability, privacy, and costs before deciding what to expand.

Proposed timing depends on staffing, access, and approval.
